Commonwealth of Massachusetts.

TRUSTEES' REPORT.

*To His Excellency the Governor and the Honorable Council
of the Commonwealth of Massachusetts.*

The Trustees of the Worcester Lunatic Hospital submit the following Report, for the year ending September 30, 1867.

The full report made by the Superintendent renders any statement on our part of statistical details, in regard to the doings of the past year, unnecessary. The great number of patients discharged recovered, in proportion to the whole number that leave our walls, is the best proof of the usefulness and success of the institution.

The grant of fifteen thousand dollars by the legislature, at its last session, placed the hospital in a better financial condition than it had been for some time previously. Unless some great rise in the prices of the necessaries of life should take place, without any corresponding increase in the price of board, (a result we do not anticipate,) we shall have no need of again calling for legislative aid to pay debts.

Yet we cannot but wish a higher price of board could be paid by the Commonwealth and towns. The price of board paid the hospital has not, since the beginning of the rebellion, been increased in nearly so great a proportion as that of provisions and fuel, or as that of board for persons in health, all over the country. The consequence is, that though the patients can be fed and warmed at the present price, we cannot, with our limited means, make all the provision for them which is desirable, both as it regards recreation and employment. A greater

variety in these respects would, no doubt, be highly beneficial to many within our walls.

A little comparison of the price of board paid by the Commonwealth to this hospital, with that paid to similar establishments in other States, for the same class of patients, in places where the cost of living is as cheap as in Worcester, and even cheaper, will show that our request for additional compensation is most reasonable. The price of board paid to this hospital by the State and towns, is \$3.50 a week.

In the New Hampshire Asylum for the Insane at Concord, the minimum charge for board has been \$4.75 the past year.

At the Butler Hospital for the Insane at Providence, R. I., the charge for paupers sent by towns is \$4.00.

At the Retreat for the Insane in Hartford, Connecticut, the lowest charge at the present time is \$5.50, and that only for State and other strictly indigent patients.

In the New York State Hospital at Utica, the ordinary charge for board is \$4.00 a week.

In the New Jersey State Asylum at Trenton, the charge for pauper and indigent patients is \$4.00, of which \$3.00 is paid by the counties from which they are sent, and \$1.00 by the State treasury. The salaries of resident officers are also paid by the State.

In the Pennsylvania State Lunatic Hospital at Harrisburg, \$3.00 a week is charged for patients supported by counties and towns. This is not, however, because this sum covers the expenses, but as a matter of policy, for private patients, who are poor, pay at the same rate, but the legislature always make an appropriation to cover the deficiency of the receipts. The prices of the most expensive supplies at this institution are also far lower than at Worcester. Coal, delivered at the hospital wharf, was \$3.90 a ton (which we suppose was 2,240 pounds.) The contract for beef, from March 1, 1867, to March 1, 1868, was nine cents a pound, pork twelve cents, mutton and veal nine cents.

At the Western Pennsylvania Hospital for the Insane at Dixmont, near Pittsburg, the price paid for board during the past year by those sent by order of court, or by directors of poor, was \$3.00 a week. The Superintendent writes: "The State treasury pays to the institution \$15,000, a sum

sufficient to pay all salaries and wages, and make up all loss in keeping public patients, at \$3.00 per week."

After reading the preceding statements, any one who knows the cost of the necessities of life at Worcester, and considers how much more expensive it is to support and take charge of an insane person than a sane one, (a subject fully considered in the report of the Superintendent,) will see at once that at least \$4.00 a week ought to be paid for the board of patients supported at the public charge.

We are obliged to call attention to the expensive, but absolutely necessary repairs and improvements specified in the Superintendent's report. The sum total, (\$12,000,) is large, but the repairs ought not to be longer delayed, and the gymnasium and bowling alleys are so important to the health of the patients, that we regard them as equally necessary with the repairs. To say nothing of humanity, it is a wise economy to employ such agencies to restore men to society. The benefit of such restoration is double. The productive power of the community is increased, and, at the same time, its burdens are diminished.

The systematic gymnastic exercises, which have been introduced among such of the females as could enjoy them, we believe will be productive of very obvious and beneficial results. While engaged in these pleasant exercises, with the aid of good music from a piano, by one of their own number, they lose the appearance, and, for the time, the reality, of insanity. This recreation, like all amusements and occupations which draw the attention of these unfortunates from their own morbid feelings, promotes their recovery.

In our Report for the year 1865, and the report of the Superintendent for the same year, as well as in his report for the present year, attention is directed to the importance of having cottages in connection with the hospital, each under the care of a man and his wife, accustomed to the treatment of lunatics, into which some convalescent and other suitable patients might be admitted. We still regard this plan with great interest. We entertain no doubt that a restoration to family life would have a happy influence on many who would still need a medical adviser, and a certain degree of restraint

and supervision, without being subjected to constant association with large numbers of the insane.

Though the treatment of lunatics often requires a separation from their own families for a longer or shorter period, yet when such persons are able to enjoy the mode of living to which they were accustomed before the access of mental disorder, a restoration to it, as far as possible, is a great remedial agent.

The hospital has no funds with which to erect cottages, and must rely either on the bounty of the State, or the liberality of individuals, for means of carrying on what we regard as a measure of the highest importance in improving our institution. A few thousand dollars would enable us to commence the work on a moderate scale.

The employment of a well educated female physician in the female wards, as recommended by the Superintendent, meets our full approbation. It is very obvious that women usually understand the characters of each other better than men do, and that with equal advantages of medical education and experience, they could judge of the bodily and mental feelings and wants of their own sex, both healthy and morbid, more readily than men.

We have, in former Reports, expressed our great confidence in the Superintendent, Dr. Bemis. The great success of the hospital, since his connection with it, is due chiefly to his skill, his sympathy for his patients, and his devotion to his work. We recommend most heartily his report to your consideration, and that of the legislature.

In his labors he is ably seconded by his assistant, Dr. Draper. We are also happy to state our satisfaction with the conduct of the financial affairs of the institution by the Treasurer, Mr. Daniel Bemis.

Very respectfully submitted by the Trustees.

We have examined the foregoing accounts for the year ending September 30, 1867, and find the footings and vouchers all correct.

WM. WORKMAN,
HENRY CHAPIN,
Auditing Committee.

In the years 1854 and 1855, plans were made and adopted for extensive operations and improvements in the buildings for the purpose of ventilation, warming, classification and new wing for all domestic purposes to be carried out and paid for from surplus funds supposed to be on hand.

The plans were faithfully executed and the expenses paid from the *annual income* of the hospital. The work extending quietly through several years, the war of rebellion came on with high prices, and found the hospital in debt from which it could not relieve itself.

No increase in the price of board was made until July 1865, consequently the debt increased. In the winter of 1866, an appropriation was asked of the legislature of \$15,000. This was opposed by members of the board of state charities, on accounts of certain alleged informalities and discrepancies in the accounts of former treasurers. No report was made by the committee on charitable institutions, and the petition was renewed in 1866, when the same objection was raised. An investigation was asked for and granted, which resulted in the following report and the subsequent passage of a Resolve by the legislature, appropriating the sum of \$15,000 to be applied for the payment of the debts of the hospital.

D. W. BEMIS,
Treasurer.

WORCESTER LUNATIC HOSPITAL, }
WORCESTER, Oct. 1, 1867. }

REPORT OF ACCOUNTANT

Employed by the Committee on Charitable Institutions.

WORCESTER, April 8, 1867.

I hereby certify that I have carefully examined the accounts of the late Samuel Jennison and those of Henry Woodward, late treasurers of the State Lunatic Hospital at Worcester, from September 1, 1853, to October 1, 1866, and find them honestly and correctly kept and fully vouched.

Mr. Jennison resigned his office August 31, 1857, to Mr. Woodward, and reported a debt due at the Worcester banks, at that time, of \$8,955.46. The trustees immediately after passed a vote authorizing Mr. Woodward to borrow of the Mechanics' Bank \$8,000 to pay the debts then outstanding.

From that time to the present, the institution has carried a debt varying from about \$9,000 to about \$20,000, on which they have paid interest amounting to \$7,258.82. This debt has been in notes, and in many cases, aside from these notes, there has been a large overdraft at the bank, and the reports made from time to time showing the amount due at the banks do not show this overdraft.

I have also examined the books at the Mechanics' Bank with scrutiny, and find every note discounted and paid to correspond precisely with Mr. Woodward's entries on his book, with the exception of some slight discrepancies in dates. These note transactions at the bank up to October 1, 1866, amount in the gross to \$164,500.

I notice on the books during Mr. Jennison's time, statements that purport to be monthly statements of "hospital funds." I cannot find any positive funds. On December 1, 1853, the books show a surplus or balance on hand of \$23,131.85 and on that very day there were liabilities against this balance to a large amount, as the vouchers now on file, paid after that date, prove; but the amount cannot now be definitely ascertained. There is, however, no doubt in my mind, but what there was at that time an actual surplus of several thousand dollars on hand.

At one time, July, 1854, the hospital loaned to the Massachusetts Cotton Mills \$15,000, and they held a bond of the Worcester and Nashua Railroad of \$500, but even at that time there were demands against them outstanding. This loan to the Cotton Mills was repaid in December 1855.

In relation to the "Hospital Fund," to which I have before referred, I copy from the treasurer's (Mr. Jennison,) books, December 1, 1854 :—

Amount of funds, including funds invested, .	\$22,629 97
Charges to the State, \$18,611 36	
Cities, towns and individuals, . . . 19,391 56	
Patients for the month of December, 3,603 60	
	<hr/>
	41,606 52
	<hr/>
	\$64,236 49

This statement shows a fund or balance in favor of the hospital of \$64,236.49. This is purely a fictitious statement. The charges against the patients for the month is a simple estimate, undoubtedly somewhere in the neighborhood of correct, but still not on hand, and not even earned. The charges against the State, cities, towns and individuals, were, when made, no doubt supposed to be correct, and to be real assets; but many of them were of long standing, some of them in a state of suspense from not being correctly located, others from other causes, and all subject to corrections and abatements. They were not at the time "funds" in any sense, but merely floating assets, subject not only to corrections and deductions, but to floating liabilities against them.

After a thorough examination of the vouchers, it appears that there has been paid by the hospital during this period for permanent improvements, or strictly con-

struction account, \$72,161 01	
Land damages, 945 00	
Real estate, 1,275 00	
	<hr/>
	\$74,381 01

Under Dr. George Chandler's admin-

istration, \$21,706 94

Under Dr. Bemis's administration, . 52,674 07

74,381 01

Although the books of the institution have not been kept in that clear and distinct form showing plainly, at first sight, every transaction under its proper date, and the true and actual condition of the finances monthly, quarterly or even annually, still I am positive that the accounts are all properly footed and balanced, and from the evidence of the charges and vouchers which I have carefully compared with the books, that the result now shown is correct. The hospital has carried a large debt since 1857, and that debt on the first day of April 1867, amounted to \$18,851.13.

LIABILITIES.

Worcester Co. Institution for Savings, note and interest,	\$12,365 00
Mechanics' National Bank, note,	5,500 00
Alfred Wyman, note and interest,	1,377 91
Pay roll,	5,443 55
Sundry bills for supplies, etc.,	15,343 84
	<hr/>
	\$40,030 30

RESOURCES.

Cash,	\$129 12
Due from towns, cities and individuals, 13,390 87	
Due from Commonwealth,	7,659 18
	<hr/>
	21,179 17
	<hr/>
Balance against the hospital,	\$18,851 13
Among the items of permanent construction are	
new centre wing, etc.,	23,029 00
Apparatus for warming, heating and draining,	28,000 00

Respectfully submitted.

W. C. BARBOUR.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Lunatic Hospital.

GENTLEMEN:—In obedience to the laws of the Commonwealth, I have the honor to submit to you the Thirty-Fifth Annual Report of the Institution over which you preside.

For the operations and results of the year in detail you are respectfully referred to the following tabular statements, and such brief accompanying remarks as may be necessary to explain them.

TABLE No. 1,
Showing the general results during the year.

	Males.	Females.	Total.
Patients in the Hospital, October 1, 1866,	190	191	381
Admitted during the year,	151	131	288
Whole number under treatment,	311	325	669
Discharged recovered,	86	72	158
improved,	47	54	101
not improved,	8	4	12
Died,	26	17	43
Whole number discharged,	167	147	314
Remaining, September 30, 1867,	177	178	355

At the date of the last report there were in the hospital three hundred and eighty-one patients. Since which time there have been admitted two hundred and eighty-eight, and three hundred and fourteen have been discharged or have died, leaving three hundred and fifty-five under treatment at the close of the year.

The total number of patients under treatment during the year was six hundred and sixty-nine. The highest number at

any one time was four hundred and twenty-seven ; the lowest was three hundred and fifty-five ; and the average number under treatment during the year was a fraction more than three hundred and eighty-nine, or one hundred and ninety-six and sixty-six one-hundredths males, and one hundred and ninety-two and forty-two one-hundredths females.

The number of males in the hospital during the year was three hundred and forty-four, and the number of females was three hundred and twenty-five. The highest number of males at any one time was two hundred and nineteen, and the highest number of females was two hundred and eight.

At the beginning of the year, there were in the hospital one hundred and ninety males and one hundred and ninety-one females. At the close of the year there are one hundred and seventy-seven males and one hundred and seventy-eight females ; and these are the lowest numbers of each sex in the hospital at any one time during the year.

The number of males admitted during the year was one hundred and fifty-four, and the number of females was one hundred and thirty-four.

The number of patients discharged was one hundred and seventy-one, of whom one hundred and fifty-eight were restored to usual health of body and mind, and were discharged as recovered. The recoveries were in the ratio of a fraction less than fifty-five per cent. to the number admitted ; or nearly forty-one per cent. to the average number under treatment ; or twenty-two and five one-hundredths per cent. to the whole number in the hospital in the course of the year ; or fifty-four and five one-hundredths per cent. to the whole number discharged, after deducting the number of those who died.

The recoveries were also in the ratio of seventy-six and six one-hundredths per cent. to the number of those whose insanity had existed one year only, or less, and only about eleven per cent. to the number of those who had been insane more than one year previous to their admission to the hospital.

The proportion of recoveries is somewhat less than has been recorded in some former years, a fact which is explained by the large number of admissions of chronic cases, several of the patients admitted having been old, incurable and worn-out

inmates of other and more fortunate institutions for long periods of years.

The absolute number of recoveries, however—one hundred and fifty-eight—is creditable to the hospital, and is in no way a blemish on the history of its life and labor.

Of the patients discharged as recovered, sixty-three had been under treatment not more than three months; forty-seven from three to six months; twenty-eight from six months to one year; and twenty for a longer period than one year. Only three patients were discharged during the year as recovered who had been inmates of the hospital for a period of three years or more, one of whom remained under treatment five years and another nine years.

Of those discharged as improved, fourteen were under treatment not more than one month; twelve from one to three months; seventeen from three to six months; nineteen from six months to one year; and thirty-nine for a longer period than one year.

Of those discharged and not improved, five were under our care less than three months; three from three to six months; two from six months to one year; and two for more than one year.

Of those discharged and recorded as improved, several were so much improved as to be able to return to their former occupations and resume their usual and customary responsibilities, and are now performing their duties in a manner satisfactory to their friends and to the public.

TABLE No. 2,

*Showing the Admissions and state of the Hospital from October 1, 1866,
to September 30, 1867.*

	Males.	Females.	Totals.
Patients in the Hospital, October 1, 1866, . . .	190	191	381
admitted in the course of the year, . . .	154	134	288
remaining in the Hospital, Sept. 30, 1867, . .	177	178	355
Of the admissions there were cases of one year or less duration,	99	81	180
Of the admissions there were cases of more than one year's duration,	52	52	104
Of the admissions there were cases the duration of whose insanity could not be ascertained, . . .	3	1	4
Patients committed by Courts,	108	91	199
committed by Overseers of the Poor, . . .	20	11	31
on bonds,	24	31	55
committed by Governor's warrant, . . .	—	—	—
committed by the Board of State Charities, .	2	1	3
committed by Commissioners of Lunacy, . .	—	—	—
Foreigners and those having no settlement in the State, committed in course of the year, . . .	67	59	126
Foreigners and those having no settlement in the State, discharged in course of the year, . . .	71	83	154
Foreigners and those having no settlement in the State remaining in the Hospital, Sept. 30, 1867, .	50	51	101

*State Paupers remaining in the Hospital at the close of each year, as
nearly as can be ascertained.*

1842, . . . 34	1851, . . . 201	1860, . . . 130
1843, . . . 38	1852, . . . 241	1861, . . . 156
1844, . . . 38	1853, . . . 216	1862, . . . 189
1845, . . . 57	1854, . . . 151	1863, . . . 175
1846, . . . 52	1855, . . . 115	1864, . . . 116
1847, . . . 121	1856, . . . 155	1865, . . . 91
1848, . . . 150	1857, . . . 119	1866, . . . 129
1849, . . . 167	1858, . . . 121	1867, . . . 101
1850, . . . 181	1859, . . . 124	

The preceding table shows that one hundred and eighty patients were committed to the hospital in the course of the year whose insanity had existed one year or less previous to their admission. Other tables in this connection show that for

a period of about thirty-five years, seventy-five per cent. at least of all patients committed to the hospital who had been insane not more than one year previous to admission, have recovered their mental health and strength, and have been restored to their families and friends, and are useful members of society. Our records also show that a large proportion of those who are placed under treatment on the first appearance of mental disease are restored within a period of six months. It is important, therefore, that the patient should at once be confided to the care of a hospital designed for the special treatment of his malady.

The table also shows that so large a proportion as one hundred and ninety-nine were committed by the probate courts of the several counties, thus making the commitment of the patients a legal, open, fair arrangement in a large majority of cases. Of the eighty-six persons who were admitted on bonds, proper certificates from physicians accompanied the bonds, except in a few cases, when the patient voluntarily sought the care and protection of the hospital. Of the one hundred and ninety-nine committed by the courts, one hundred and twenty-six were supported by the charity of the State. Of this class, one hundred and fifty-four were discharged, leaving one hundred and one in the hospital at the close of the year.

TABLE No. 3,

Showing the Number Admitted, Restored, Improved, Died, &c., in each Month in the Year.

MONTHS.	ADMITTED.			REMOVED.												REMAINING.

The foregoing table shows the causes, as assigned by the friends of the patients, of insanity in the admissions of the year and of all previous years since the opening of the hospital. These may all be arranged in two classes, according as their influence was of a moral or physical nature. The table illustrates with sufficient clearness for all practical purposes the proportions which these classes bear to each other; and in this respect the statements made in the table are more reliable than in any other.

In general, the histories given us of the patients are meagre and not wholly to be depended upon, so that it is impossible to give a complete classification of the causes of insanity in the admissions of one year even, or show very clearly the combinations of circumstances influencing the patient previous to his mental disease. It is hoped that a more satisfactory table in this department may hereafter be presented, considerable labor having already been expended in that direction.

It will be seen by the foregoing table, that the number of patients under treatment during the year was larger than during the previous year, and the average number was considerably greater. It will also be noticed that while the number

was increased, the aggregate cost of support was somewhat diminished, thus making the average weekly expense per patient very considerably less.

While great care has at all times been taken that the expenses of the institution should be kept as low as possible, it has seemed to be a wise economy to expend all that was necessary for the most complete and speedy restoration of all curable patients, and just and humane to spare no expense in our efforts to relieve, as far as is possible, the mental condition of those who do not recover, and render their situation as comfortable as the nature of their several complaints will permit.

While the cost of support has been somewhat diminished, the following statement of prices for several years past will show no great reduction in the cost of any article of consumption, except coal. Breadstuffs and labor still remain at the high rates held during the war, with no prospect of immediate change.

A considerable expense must be made in the course of the ensuing year, for paints and oils, and the necessary labor of painting, papering and general repairing, which has been neglected during the period of high prices, and which cannot longer be left undone without great detriment to the property of the Commonwealth. The annual repairs of an establishment subjected to the hard uses of hospitals for the insane, must always be considerable.

Twenty-six males and seventeen females have died during the year. Of these deaths, three resulted from the complications incident to mania in its acute stage, three from organic disease of the brain, eight from phthisis, two from disease of heart, seven from epilepsy, five from general paralysis, six from marasmus, five from the diseases incident to old age, and four from the gradual exhaustion of chronic mania. Three of the deaths occurred suddenly, two of which were almost instantaneous.

Of the patients who died in the course of the year, four were admitted while suffering from mania in its acute stage, thirteen while suffering from chronic mania, nine from melancholia, and seventeen from dementia.

Of those who died, three did not live more than one week after being placed in the hospital, five others died within two weeks after admission, and four more died before the expiration of one month; six died between one and three months, one between three and six months, and three between six months and one year after admission, and twenty-one were residents of the hospital for longer periods than one year.

The records of the hospital show in each year how dangerous a disease insanity really is; and although a favorable termination may generally be expected after safely passing through the acute stage, yet so large a proportion as thirty-nine out of forty-three deaths occurred to patients who had been admitted to the hospital after the acute stage of disease had passed, and recovery had become well-nigh hopeless. It is safe to suppose, that had these persons been earlier committed to some hospital for curative treatment, the recoveries and not the deaths, of some of them at least, might have been reported.

It has happened, in several instances in the course of the year, that patients have been brought to the hospital who were too ill and feeble to bear the excitement and fatigue of the

journey, and a permanent injury had resulted to the persons thus committed. In some of these cases death has speedily followed the admission of the patient.

While it is highly important that prompt measures be resorted to in the treatment of insanity, the most scrupulous care should be taken that the patient be not subjected to the exposure and fatigue attendant upon removal in a feeble and exhausted state of health.

As usual, quite a number of very aged persons have been committed to our care in the course of the year. Four persons have been committed to the hospital, who were each more than eighty years of age, and one of whom was more than eighty-five. Five have been committed who were between seventy-five and eighty, and five who were between seventy and seventy-five. The hospital is not a proper place for these persons. They can receive no benefit by a residence in it. They should be cared for by their families and friends, and failing in that, there should be some retreat, some home, where these feeble, aged persons could quietly spend the remainder of their days, under the care of kind, faithful, judicious nurses, and peacefully pass from this to the world to come. You will remember that this subject has been often reported to you, and you will also remember with what feelings of sadness you have, in your visits, contemplated the condition of these poor old men and women, sent away from home, family and friends, at that period of life, and in that condition of mental and bodily infirmity, when the kind attentions of relatives and friends, the comforts and pleasures of home, are most needed, and for the hope of which, all the energies of youth and manhood have been exhausted. Let me most earnestly recommend the establishment of a home and family for this most helpless class of your patients, and let us hope that the recommendation may be most speedily acted upon, so that we may be able to give these persons committed to our care the comfort and protection they so much need.

Among the old and feeble patients in the hospital, there has been more than the usual amount of bodily illness of a somewhat mild character, caused in part by the enfeebled condition of many when admitted, and in part by the long-continued

cool, wet, changeable weather of the spring, summer and early autumn.

The following tables will illustrate some of the results of labor performed by the inmates of the hospital. The greatest and best of all results, however, the increased health, vigor and activity, both mental and physical, of the patients, cannot be shown in any table, and can hardly be estimated.

About sixty per cent. of the patients perform some labor, directed and assisted by their attendants, and about twenty per cent. labor to advantage, under the direction of their attendants, without assistance. A very large proportion of the females are employed during some part of each day, at labor of some description. The males suffer from the want of those light employments which are so convenient and useful to females, and having been bred only to labor of a rougher character, are, when insane, little inclined to form any new habits useful to themselves or others.

All labor done by the inmates of the hospital is of an unsteady, unreliable nature, requires constant oversight, direction and assistance, and is of a quality which few employers would be willing to purchase at any price.

Our patients, perhaps, receive the most direct advantage of labor from the healthy, pleasant occupation the farm and gardens afford to such as engage in that kind of work. Our tables show that the products of the farm have been abundant, and have well repaid the labor devoted to their cultivation and growth.

A very considerable amount of labor has been expended in fencing, ditching, under-draining and improving the value of the land belonging to the hospital. The gardens have been materially improved, the lawns enlarged, new walks and driveways laid out, and many trees removed, and others transplanted.

With feelings of gratitude we are able to report that there has been no attack of epidemic disease in the hospital during the year, and there has been also almost entire absence of acute disease of any form.

The hospital was opened for the reception of patients on the 18th of January, 1833, since which time seven thousand nine hundred and two insane persons have received the benefit of its care and custody. Of this number, three thousand seven hundred and fifteen have been discharged recovered, and restored to their families and friends. One thousand five hundred and twenty have been discharged improved; one thousand three hundred and fifty-four have been removed by their friends or guardians, or were transferred to other institutions without material change, and nine hundred and sixty-one have died.

It is my duty to complain of the manner of commitment in many instances of patients to the hospital. Some officers and guardians undertake to mislead and deceive the patients when intrusted with the duty and responsibility of commitment, by promises of journeys, or visits to places of entertainment, or by making the patient believe the hospital a hotel, and on entering by giving such orders as are usual at such places. The officers of the hospital have never been guilty of promoting any such practice, but have, on all occasions, said and done what they could to correct the evil.

Feelings of kindness undoubtedly prompt many individuals to adopt some plan of deception when about to place their insane relations in a public hospital; but such plans are always destructive to the welfare of the patient and the interests of the institution. They tend to invest the disease with horror and disgust. They multiply and strengthen the delusions of the patient with regard to the hospital, and by a certain reaction, they diminish the public confidence in the care and treatment of the insane. It is acknowledged by all who have had much to do with persons suffering from mental disease, that next to kindness, perfect candor is most likely to calm the excited passions, and reassure the disturbed confidence of the deranged mind.

A large majority of patients, if candidly told they were about to be removed from home and placed in a hospital, would cheer-

fully acquiesce in the arrangement; and if persuasion should fail to remove them quietly, it would be infinitely better that necessary force should be used by friends and relatives, than that deception should be resorted to, and thus destroy the confidence of the patient, and force upon his diseased mind the conviction that the officers of the hospital were concerned in a plot to deprive him of his liberty.

Having personally observed the conduct of nearly five thousand patients on their admission to the hospital, I do not hesitate to declare the extreme rarity of any exhibition of violence or anger caused by their commitment, in an open and legal manner, to the care and custody of a public institution. On the contrary, many who had been very troublesome, violent and dangerous, become immediately quiet and comparatively calm when they are placed in the wards of the hospital, and commence at once to exercise all the powers of self-control they possess.

It is only when fraud and deception has been resorted to, that the patient becomes suspicious, restless, turbulent and violent. When honestly and openly committed, and on their admission treated with candor and kindness, they recognize the fact that they are among friends whose care it is to soothe and protect them.

Mistakes like these must be borne until the community shall be made to regard insanity as a disease, and not a vice; until they shall be able to look upon those suffering from mental disease as they look upon other sick people afflicted with a malady no more horrible, and as curable in its early stages, as any other; and until they can be made to believe that when cured they are fully and completely restored, and as deserving of confidence and trust as they ever were.

Seclusion has been resorted to during short intervals, generally for a few hours only at a time, quite frequently; its employment being confined to a very few individuals in the excitable wards, whose violent and destructive propensities during their paroxysmal attacks, render it necessary that at such periods they should be separated from their companions.

The ordinary sleeping-rooms of the ward are always used for this purpose. Rarely has any one been placed under so called physical restraint.

One patient has been in seclusion a small portion of every day, and when not in seclusion wears loosely fitting leather bands upon her wrists, so loosely however that she is able to sew and knit with ease and comfort while thus confined. The destructive tendencies of this patient have been for a long period of time quite extraordinary; when placed by the side of other patients, her efforts to assault, worry and to tease are incessant. When alone her excess of vitality is generally expended upon her clothing and furniture. All the usual devices for safety and protection have been thus far quite useless.

Another female patient has been permitted to remain in her room a large part of the time for about two-thirds of the year. When thus secluded she is generally quiet, comfortable and happy; but when with others she is always abusive and violent; she cannot even suffer the ordinary change of cleansing her room and making her toilette in the morning without an exhibition of the most violent temper and vulgar abuse.

One male patient, who has in other institutions made several homicidal attacks, wears on his wrists leather bands so loosely fitted that he assists readily and easily in sweeping and scrubbing.

And one other male patient has during a small portion of the year been kept constantly in his room on account of long continued violent maniacal excitement, from which he is now happily recovering.

The absolute amount of seclusion and restraint will be better understood by you when I state what the official records will prove, namely, that the whole time spent in seclusion and restraint directed or permitted by the management of the hospital bears the proportion of only twenty-eight one thousandths of one per cent. to the whole time passed by the average number of patients in the hospital during the year.

This state of things ought certainly, to be highly satisfactory to you when it is remembered that patients are often brought to the hospital in irons and strait jackets; and when it is no uncommon thing that from notions of prudence and safety the patient is accompanied to the hospital by two or three stalwart men, who not unfrequently relate with evident satisfaction the story of their skill in betraying the confidence of the poor

insane person until he is fairly within the walls of the institution.

Early admission to a hospital cannot be too strongly or too frequently urged upon the friends of the insane. Almost every hospital report most earnestly recommends the removal of the patient to an institution during the first stages of mental disease. So common has this become that no new argument can be presented on the subject. It is true, as all statistics show, that a very large proportion of cases recover if treated in the commencement of the disease, but if left without treatment for the space of a year or more there is little if any hope of recovery or improvement even.

Some few do certainly recover, but they are exceptional cases, occurring under the most favorable circumstances. Our own records show how few recoveries may be expected from this class of patients.

When we consider that these patients with such slight prospect of restoration must remain during the remainder of their lives; objects of constant care to their friends and the community, and the subjects of the deepest mental misery and distress; and of a misfortune so great that it separates them from all their former social ties, pleasures and responsibilities, fills their minds with terror, gloom, suspicion and delusion; and which more or less completely destroys all the mental faculties and renders them helpless, hopeless and idiotic; surely every consideration of humanity should impress upon us the necessity and responsibility of an early attention to the first symptoms of insanity; and every one in any way connected with such a case should lose no time in placing the sufferer under special treatment and thus facilitate the removal of this terrible malady. When the disease is for a time unattended or unchecked and receives no proper treatment, it generally assumes a graver character and the sufferer either becomes hopelessly demented or the subject of wild and unnatural ideas which render him a pest and a danger to society. He may be neglected until he fires a dwelling or commits a homicide and is tried by the laws of the land as a criminal for acts which are but the manifestations of mental disease.

It is true that a large number of the cases are of a milder type, and pass quietly through the stage of chronic insanity to

that of dementia. But the care of these cases of chronic insanity is attended with long-continued expense, and at best only affords slight relief, when, if earlier placed under treatment, a small expense for a short period would, in a large proportion of cases, end in the restoration of the afflicted patient to sound mental health.

In close connection with this subject, that of premature removals deserves your attention. There can be no doubt that the results of treatment tabulated in this Report, would have been materially different, had not many patients been removed before sufficient time had elapsed to afford any plan of treatment a fair trial. Some who did not recover would undoubtedly have been restored if they had been suffered to remain, and persevere in the use of remedies after they had been placed in the hospital, while others who were reported improved, were so fortunate as to continue improving after their return to their homes, until perfect recovery had taken place. A few others, reported not improved, would have received benefit if their friends had understood the chronic character of their cases, and the importance of a steady persistence in the use of remedial measures.

Little, if anything, need be said on the treatment of insanity, beyond a brief statement of the plan followed in this hospital. In all institutions established for the treatment of mental disease, the various measures suggested as likely to promote recovery, are usually divided and considered under two separate heads.

The medical treatment of insanity includes the use of such remedies as will act upon the body in such a manner as to assist in the removal of the derangement of such functions as are believed to be the cause of the disease of the mind.

The moral treatment of insanity comprehends all the means and agencies which are supposed to exert immediately on the mind *such* an influence as will *tend* to restore its healthy and natural operations.

In order to fulfil the indications of the medical treatment of the insane, all known remedies are faithfully prescribed and administered, consistent with the pathological conditions of the patient.

Mental health has a much closer relation to physical infirmity than we are willing to admit ; and the extent to which human happiness depends upon the integrity of the physical organs, and the perfection of their functions, cannot be estimated.

Some unhealthy condition of the nervous system, without producing any well-marked bodily symptoms, may so control all the operations of the mind, as to diminish every capacity for enjoyment, paralyze every susceptibility for pleasure, and completely overwhelm the sufferer with fear, suspicion and gloom.

The mind and the body, of a necessity, participate in the health and disease of each other ; and the particular condition of the one may, to a certain extent, be determined by that of the other. Thus indigestion may be the cause or the result of an irritable, unhappy disposition of mind ; and ascerbity of temper may be the occasion or consequence of an acid state of the stomach.

The relation in which complaints of the alimentary canal stand to disease of the brain and nervous system, is not always clear ; in some it is the relation of cause ; in others it may be that of effect. But even then there is a reaction of the secondary upon the primary complaint, and the first is aggravated by the complication.

Among the many physical conditions of mental disease, perhaps no one requires more frequent attention, or is oftener overlooked, than that disordered state of the stomach and bowels, which so often gives rise to constipation ; sometimes alternating with diarrhœa, and accompanied with indigestion, flatulence and eructations, anorexia and nausea, transient pains in the hypochondria, livid and yellow suffusions of the skin, viscid secretions of the mouth, and offensive breath ;—that condition of the alimentary canal which, by sympathy, influences the brain, and gives rise to that general uneasiness and dissatisfaction which troubles so many persons so often ; that state of the mind in which nothing in the affairs of life gives pleasure or hope ; that quality of the affections which rejects all the attentions of friendship, all the kind offices of love, and produces also that depressing effect which diminishes the strength of the memory, blunts the imagination, and destroys the power of concentration.

No class of patients suffer more seriously, and in the treatment of mental disease none are more likely to be neglected, than those who are afflicted with this general disorder of the digestive organs.

The deranged state of the thinking faculties, the sense of weariness and oppression, at first slight and irregular, and hardly noticed, becomes daily more severe and oppressive, until the power of self-control is lost, and by the influence of disease, or it may be by accident, some one sensation or emotion becomes exalted, and the judgment impaired; a general and constant irritability of mind succeeds, which disturbs and deranges all the mental operations.

Constitutional vigor is generally much impaired among the insane; hence the necessity of the sustaining influence of food, in quantity and quality, generous and nutritious; not only is a liberal supply of animal food requisite, but stimulating drinks must sometimes form a part of the ordinary diet. The appetite, rendered feeble and capricious by weakness, must be recovered by food that imparts strength. When solid food is refused or rejected, milk, cream, broths, soups, and beef-tea may all be brought into use. Much may be accomplished by making everything about the dining-rooms and tables as attractive as possible, by disposing of the viands in such a manner as to provoke an appetite, by engaging in lively conversation, and by spending as much time at the table as can be spared from other duties; remembering at all times that the powers of life must be supported mainly through the stomach, and that by the administration of a liberal supply of nutritious food.

In the treatment of mental disease, next in importance to nutritious food, is an abundant supply of fresh, pure, moderately warmed air. Great care should be taken that the air is not over-heated or scorched. The insane are rarely satisfied in an atmosphere of a temperature below seventy degrees Fahrenheit, unless they are accustomed to much out-door exercise; and even then fault will be found when the thermometer indicates a temperature of sixty-five degrees.

Exercise is of the greatest importance among the means of restoring both the physical and mental health of lunatics in all curable cases. Walking or riding in the open air, during as

great a portion of the day as the strength of the patient will permit, is often of great service. Long walks in the fields and woods, in company with a suitable attendant, have, in many instances, been the principal means in the restoration to soundness of mind and health of the insane. It is necessary that the attendant or guardian be intelligent, cheerful, and of a kind and forbearing disposition, otherwise he is worse than useless.

All establishments for the insane ought to be provided with the means of affording regular and systematic labor, chiefly in the open air, to as many of the patients as can be induced to undertake it. Gardening, and the various agricultural works, should, as much as is possible, employ their time at regular and stated periods of the day, and by a system of judicious management, many of the inmates, even cases of dementia, may be brought into the habit of devoting themselves to useful occupation.

The insane suffer much from feebleness of circulation, and consequent coldness of extremities. It is desirable, therefore, that their clothing should be always of thick and warm material, and perfectly neat, clean and tidy.

Indifferently clad patients very soon lose their ideas of propriety, and that self-respect without which they can rarely recover. The supply of clothing should be so abundant, that frequent changes of all the apparel worn by each individual, may be made without difficulty or delay.

Personal cleanliness demands and should always receive the strictest attention, both as a means of preserving the physical health, and as an important moral agency. Exhalations from the bodies of the insane are often strongly marked, and a large class of patients are liable to become careless and filthy in their habits. In addition to the regular use of the tepid bath for purposes of cleanliness, it is necessary to exercise great care, in order to insure a proper observance by the patient, of this great essential of health and comfort.

Care, anxiety, grief, distrust, domestic affliction, poverty, and reverses of fortune are among the most prominent moral causes of insanity. In high states of civilization, when the relations of men are intimate and likely to suffer by contact, when their nervous susceptibilities are unduly exalted, and

their minds become irritable by a social friction, the influence of the passions and emotions in the production of mental disease, cannot be overestimated; and it should be borne in mind also, that not only do the passions and emotions exercise a great influence *upon* the *body*, but that the condition of the body controls, in an equal degree, the operations of the mind.

How important then, in a hygienic point, it is, that those who have become diseased and seek the benefit of treatment, are not only able to be removed from the excitements instrumental in the development of their malady, but that they are provided with every facility for treatment which skill and experience can suggest or invent, or capital procure. The most strict personal attention of the officers of the establishment should be given to their diet and regimen. Their rooms should be large, light, airy and well furnished; with a pleasing degree of warmth in cold weather, and perfect ventilation at all times. The appointments for bathing should be convenient and extensive. Their food should be nutritious, wholesome, and spread before them in the most inviting manner; music, books, pictures, and games should always be at hand; raised walks, covered galleries for stormy weather, bowling alleys, swings, gymnasiums, croquet grounds and skating rinks, are all highly serviceable in the mitigation of disease, and tend strongly to promote recovery.

In the moral treatment of insanity, all these means prove useless, unless assisted and directed by kind, faithful, intelligent attendants. No others can carry out your plans, no others are willing to devote themselves wholly and entirely to the work.

Patient, intelligent perseverance in kindness, with some indulgence as a reward for good conduct, and an honest firmness in the application of proper measures, will often secure great quiet and comfort among the most miserable and wretched sufferers from nervous disease, and restore habits of order and self-control to those persons of peculiarly perverse intellect and faulty education, who have never learned the habits and principles of self-government; kind and judicious conversation is with very many a powerful moral means of restoration to reason. Even when it seems to be listened to with indifference, it is often attended to and carefully reflected upon. The

mere habit of pondering over it and thinking upon it, diverts the mind and gives rest to the diseased feelings, and the patient seems at once to make an advance towards recovery.

These brief remarks indicate very feebly something of the plan of treatment most faithfully and hopefully followed in your institution. Whatever of success it has attained, is due mainly to those young men and women who have so scrupulously and perfectly carried out our plans; who have so wisely assisted in all the details of trial and labor, without any ulterior design or selfish motive; with no thought of reward save that of an approving conscience. Some such there are, and in your service, who have by their intelligent, persevering kindness, by their untiring energy and devotion to the wants of the insane, exalted the performance of the most menial duties to the character and dignity of a mission. By the assistance of such, and only such, can we hope to make our hospital all it should be.

In the appointments of this hospital a want has long been felt, of a limited number of attendants of a higher order than any yet found in hospitals for the insane. Men and women possessed of true Christian feelings, elevated in character, courteous in manner, cultivated and intelligent in mind, and having that peculiar tact and nicety of feeling, which will enable them to move and act among the various grades of patients and employees, without friction or distrust, would supply a want frequently felt and often expressed by both patients and officers. They should not be confined to the ordinary duties of the ward, but should act as teachers, guides and companions to such as need their assistance. To some they would be of great benefit as instructors, to some as readers, to many others as guides and companions.

Another want frequently felt, is the presence, in the male wards, and particularly in the wards for the old and feeble men, of one or two women of middle age, of strong Christian feelings and elevated characters, who shall act as nurses and companions to those who so much need them. These old and sick men, who have but just left their own houses, their wives and their daughters, placed among entire strangers, and often necessarily under the care of young men, who have no tact or experience in the performance of their duties, and but little

true feeling in regard to them, must suffer most keenly the loss of such attentions as woman only can bestow.

The presence in our male wards of one or two women well acquainted with the whole subject, of refined manner, Christianly patient, so intelligent as to be a guides, friends and counsellors to all who would need their services, would be making a great advance toward perfecting our plan of treatment.

Another want which has long been felt, and often most timidly expressed, is that of a thoroughly educated, refined, Christian woman, as an assistant-physician, on the female side of the house.

I know perfectly well the cost of any such recommendation ; but my interest in the welfare of the insane, and my long experience in the details of hospital life, enable me to speak with some degree of confidence in reference to this matter, and I express my earnest conviction, in desiring that some well educated young woman, commencing as an attendant, shall pass through a regular course of instruction, become duly qualified, and at some future day act as medical assistant in the female department of this hospital.

On the evening of every day, and on the afternoon of Sundays, religious services have been held in the chapel by the Rev. George Allen, who for more than eighteen years has so faithfully and acceptably performed the duties of Chaplain. One afternoon of each week has also been spent by the Chaplain in wards of the hospital, in visiting and conversing with such patients as desired religious instruction and comfort. And from my personal knowledge, I venture to say, that great benefit has resulted from these interviews. The promises of the gospel, rather than the terrors of the law, have been wisely presented, with such cheering and hopeful words, and in such a quiet and modest manner, that not only have the depressed been consoled, the old and feeble comforted and strengthened, but the convalescent have also received salutary lessons, the benefit of which they retain after they return to their homes.

All the usual amusements, recreations and entertainments have been pursued with vigor during the year. Lectures, concerts, social parties, dancing parties, readings and recitations during the winter season ; long walks, rides, croquet parties and impromptu picnics during the summer, are among the more

common means used for breaking the otherwise dull and tedious monotony of the time.

A class in light gymnastics was during the winter organized among the female patients, and regular lessons have been given twice in each week. The interest excited at the first continues unabated, and much good is expected to result from this enterprise.

An attempt has been made to extend our facilities for gymnastic exercises for both sexes by putting up such fixtures on the lawns as seemed most desirable in carrying forward this part of our work.

The amount of discipline and self-control which all our attempts of this character exercise on the patients, is productive of great good in dispelling gloomy forebodings and in cheering the hearts of the depressed. Even those under the influence of deep melancholy, who can take no active part in the scenes themselves, and who seem to have little or no interest in them, *do* often look with pleasure and delight on the games and plays which their minds are too dull and vacant to fully appreciate.

A large number of newspapers and periodicals and illustrated papers are received by the patients every week. Not a few receive direct from the publishers their accustomed paper or magazine. The reading rooms and libraries are well supplied with books, maps and periodicals. More than one thousand pictures, of various kinds, hang on the walls of the several wards.

In making up the annual reports of this hospital, it has not been the custom, for many years past, to express any want or ask for any assistance; but as appearances now indicate that high prices will continue to rule, and that it will be considered uncharitable and unwise to raise the price of board to a corresponding rate of increase, it may be well to consider the propriety of asking legislative appropriations for such objects as are deemed of vital importance.

The water closets and bathing rooms in the centre wards are so worn out by long continued use, that they must be replaced immediately, and will cost one thousand dollars. The water closets in the return wings need extensive repairs, and will require an outlay of five hundred dollars.

The bowling alleys taken up in making alterations some years ago should be replaced, and will cost five hundred dollars.

The verandas on each side of the house should be enlarged, and brought forward with new fronts, giving space for parlors, or day rooms for the centre and Johnnot wards,—a work which would require an outlay of about five thousand dollars.

Then a building for the purposes of a gymnasium is much needed, and would cost about five thousand dollars; making, for permanent improvements and construction, the sum of twelve thousand dollars.

It is believed that no one who will investigate the subject would doubt the propriety or utility of these improvements, or regard the sum stated more than sufficient to do the work in a plain and substantial manner.

I beg to remind you that the boilers and pipes for warming the establishment have been in constant use, with only very slight repairs, eleven years, and will not probably stand many years longer; indeed, it is supposed that the steam apparatus has already operated longer, as well as more satisfactorily, than that of almost any other similar establishment in the country.

I trust you will bear with me while I once more, very briefly, call your attention to the subject of improved arrangements for the care and control of certain classes of the insane. All Alienists are agreed upon the necessity of classification; of separating such as are liable to injure themselves or others in any way; and permitting those to associate together who may contribute in some degree to each others' restoration. How can this be *well* done under existing circumstances? How can it be done *at all*, unless the establishment is both a hospital and an asylum, so constructed that its several parts are more or less detached from each other? How can the old and feeble be separated from the violent and noisy, so as not to be disturbed by them? How can the convalescents be placed beyond the constant annoyance of those who have depraved habits, obscene language and disgusting manners? And how can those unfortunate persons be made comfortable and happy who only suffer from some disturbance or obliquity of the reflective faculties; whose perceptions are keen, whose feelings are

tender, and whose sense of propriety remains active; how can they be properly directed and controlled in any existing hospital arrangement?

These various classes of patients require for their restoration to health and soundness of mind a wider separation from others than is at present possible. Not isolation, but segregation, which shall divide them into groups, possessing nearly the same characteristics, mental and physical, and give to each a house within the hospital precincts. The house should be convenient, tastily arranged, and have a garden, lawn, and such other appointments as would be desirable for a family of well-to-do people.

In view of the constantly increasing demands for accommodations for the insane, it is most earnestly desired and recommended, that some measures be taken to put in operation, in a small, safe and inexpensive way at first, the plan indicated by these remarks.

If need be, appoint a committee of your board to present the subject to the legislature for authority and assistance.

It cannot be that Massachusetts, with her five large hospitals, her three large pauper establishments, her numerous smaller asylums, receptacles and almshouses, is so well satisfied with her existing arrangements that she is unwilling to take advantage of some occasion to try other methods of caring for and restoring this unfortunate class of her children. If so, why do her citizens so often seek for their insane relatives accommodations which the Commonwealth does not afford to any, even the most affluent? This question is rapidly becoming one of the great problems of social science. To meet it fairly and honestly, and to assist, wisely and faithfully, in its solution, is our duty and privilege.

I am especially grateful to Miss Dix for many favors. To Dr. R. W. Hooper and William Emerson Baker, Esq., for valuable and rare photographs; and particularly to two friends of the original and of the Worcester hospital, for a very fine and life-like portrait of Miss Dix, painted by Waugh, of Philadelphia, and sent to us as a Christmas gift. It now graces the walls of the trustees' room in the hospital.

I am also under obligations of respect and gratitude to my assistants in the various departments of official labor. They

have performed their duties cheerfully and faithfully, and rendered all necessary assistance in the management of the institution. These duties are arduous, and often peculiarly trying; yet no word of complaint or murmur of dissatisfaction is ever heard.

The employees have generally performed all their duties in a highly satisfactory manner.

With great pleasure I acknowledge from several members of Congress and heads of departments valuable public documents, which annually increase the library of the patients. The publishers of many newspapers have also sent to us their regular issues, without cost. Hon. J. D. Baldwin, Hon. J. S. C. Knowlton, Dr. Bartholomew, publishers, of this city, and S. S. Thompson, Esq., continue as heretofore to send us large packages of exchanges, besides the daily and weekly issues of their own publications. Dr. Hooper sends us valuable magazines. Mr. and Mrs. Munroe, Mr. Hill, Miss Hill, Mr. Jordan and Mr. Rice, of the Old South Church choir; Mrs. Doane and Mr. Allen, of the Central Church choir; Mr. Chandler and Mrs. Sumner, with their class; Miss Nellie Fiske and Mrs. Denny, of Union Church choir; Mr. D. H. O'Neil and choir of St. John's Church; Miss Annie Sargent, Mr. Burt, Mr. Zittertart, Mr. S. R. Leland, and many others, gave us concerts of sacred music during the long evenings of winter and spring. My acknowledgments are also due to Miss Eliza Lamb, who has so kindly assisted us in our light gymnastic class, and to William Knowlton, Esq., for many favors.

The year just closed has been one of unusual anxiety and interest, but we have been met by no insurmountable difficulties, nor alarmed by impending dangers. The number of patients who have received the benefits of the hospital has been large, and the general history of the year is one of prosperity.

By the act of a wise and generous legislature, the hospital has been relieved of its financial difficulty, and it has now better facilities for carrying on its great work than it ever before possessed. I desire to express my thanks for the encouragement thus afforded me amid the labors and anxieties of my position.

To you, gentlemen, and each of you, I desire to express my grateful sense of obligation for the many kindnesses shown me,

and for the ready counsel and assistance always afforded me in conducting the affairs of this institution, and promoting in every way the comfort and welfare of its inmates.

We close the labors of the old year, and commence those of the new, with unfaltering trust and confidence in the strength of Him who has upheld us in the past, hoping and believing that in the future our labors may be crowned with success.

MERRICK BEMIS.

WORCESTER LUNATIC HOSPITAL, }
WORCESTER, Oct. 1, 1867. }

METEOROLOGICAL OBSERVATIONS

MADE AT

THE STATE LUNATIC HOSPITAL, WORCESTER, MASS.,
1866-7.

Latitude, 42° 16' 17" N.; Longitude 71° 48' 13" W.

Elevation, 528 feet.

EXPLANATION.—The force of the wind is estimated upon a scale of 10 and indicated by figure affixed to the letters denoting the direction. When no number is affixed, 1 is meant.

APPENDIX.

FORMS CONCERNING ADMISSION TO THE HOSPITAL.

P E T I T I O N .

[The applicant must answer in writing the printed interrogations accompanying this blank.]

To the Honorable the Judge of the Probate Court, in and for the County
of _____ :

_____ of _____ on oath complains
 that _____ of _____, in said county
 of _____, is an insane person, and a proper subject for the treatment
 and custody of the Worcester Lunatic Hospital.

Wherefore, h _____ prays that said
 may be committed to the said Worcester Lunatic Hospital according to law.

_____, ss.

A. D. 186 .

Then the above named _____
 the above complaint, by h _____ subscribed, is true.

_____ made oath that

Before me,

Justice of the Peace.

I, the subscriber, one of the selectmen of _____
 where said _____ resides, hereby acknowledge
 that notice has been given to me of the intention to present the foregoing
 complaint and application.

A. D. 186 .

To the Honorable the Judge of the Probate Court, in and for the County
of _____ :

The subscriber, having made application to your Honor for the commitment
 of _____ to the Worcester Lunatic Hospital, as a lunatic,
 now presents the following statement, in answer to interrogatories:—

What is the age of the lunatic? Ans.

Birthplace? Ans.

Civil condition of lunatic? Ans.

Occupation? Ans.

Supposed cause of disease? Ans.

Duration? Ans.

Character—whether mild, violent or dangerous? Ans.

Homicidal or suicidal? Ans.

Paralytic or epileptic? Ans.

Previous existence of insanity in the lunatic? Ans.

Previous or present insanity in any of the family? Ans.

Habits in regard to temperance? Ans.

Whether he has been in any lunatic hospital; if so, what one, when, and how long? Ans.

(If a woman.) Has she ever borne any children? Ans.

(If a woman.) How long since the birth of her last child? Ans.

Name and post-office address of some of the nearest relatives or friends? Ans.

What facts show whether h has or has not a settlement, and where, if anywhere, in this State? Ans.

[For the law relating to settlement, see Gen. Stat., chap. 69.]

Applicant.

PHYSICIANS' CERTIFICATE.

The subscribers, respectable physicians of _____ in the county of _____, having made due inquiry and personal examination of _____ named in the foregoing application, within one week prior to the date hereof, certify that the said _____ is insane, and a proper subject for the treatment and custody of the Worcester Lunatic Hospital.

A. D. 186 .

, ss.

A. D. 186 .

Then the above named _____ and _____ made oath that the above certificate is true.

Justice of the Peace.

Commonwealth of Massachusetts.

ss. At _____, in said county on the _____ day of _____ A. D. 186 .

On the application of _____ for the commitment of _____ in said county, to the Worcester Lunatic Hospital, _____; notice in writing having been given by said applicant to one of the selectmen _____ of _____ where said _____ resides, of h _____ intention to make said application, and said _____ having been duly notified of the time and place appointed for hearing, it appears, upon a full hearing, that said _____ is an insane person, and a proper subject for the treatment and custody of the Worcester Lunatic Hospital.

Wherefore it is ordered that said _____ be committed to the said Worcester Lunatic Hospital.

Judge of Probate Court.

FORM OF OVERSEERS' BOND.

Worcester Lunatic Hospital.

Whereas, _____ of _____, in the county of _____, has been admitted a boarder in the Worcester Lunatic Hospital, _____, a majority of the Overseers of the Poor of the town of _____, in the county of _____, in behalf of the inhabitants of said town, do hereby promise _____ Treasurer of said Hospital, to pay him, or his successor in said office, the rate of board which may, from time to time, be determined by the Trustees of said hospital, for said patient, so long as h shall continue a boarder in said hospital, with such extra charges as may be occasioned by h requiring more than ordinary care and attention, to provide for h suitable clothing, and to pay for all such necessary articles of clothing as shall be procured for h by the Steward of the hospital, and to remove h from said hospital whenever the room occupied by h shall be required for a class of patients having preference by law, or in the opinion of the Superintendent, to be received into said hospital: Also to pay not exceeding fifty dollars for all damages h may do to the furniture and other property of said hospital, and for reasonable charges in case of elopement, and funeral charges in case of death. Payment to be made quarterly, and at the time of removal, with interest on each bill from and after the time it becomes due.

Witness our hands this _____ day of _____
Attest. _____

(Signed,)

{ Overseers of the Poor
of the
Town of _____

FORM OF PRIVATE BOND.

Worcester Lunatic Hospital.

Whereas, _____, of _____, in the county of _____, as Principal, and _____, in the county of _____, as surety, do hereby jointly and severally promise _____ Treasurer of said hospital, to pay him or his successor in said office, the rate of board which may, from time to time, be determined by the Trustees of said hospital, for said patient, so long as h shall continue a boarder in said hospital, with such extra charges as may be occasioned by h requiring more than ordinary care and attention; to provide for h suitable clothing, and to pay for all such necessary articles of clothing as shall be procured for h by the Steward of the hospital, and to remove h from said hospital whenever the room occupied by h shall be required for a class of patients having preference by law, or in the opinion of the Superintendent, to be received into said hospital. Also to pay, not exceeding fifty dollars, for all damages h may do the furniture and other property of said hospital, and for reason-

able charges in case of elopement, and funeral charges in case of death. Payment to be made quarterly, and at the time of removal, with interest on each bill from and after the time it becomes due.

Witness our hands this day of , A. D. 186 .

Attest. (Signed,)

, *Principal.*

, *Surety.*

Patients will be received into the hospital at any time, if the following conditions are complied with:

If the patient is in indigent circumstances, and has no settlement in any town in the Commonwealth, the Probate Court, or if in the city of Boston, the Superior Court, will issue a warrant for the commitment of the patient to the hospital. The State will then pay the cost of support, and the county from which the patient is sent will pay the expenses of the commitment.

If the patient is in indigent circumstances, and has a settlement in any town in the Commonwealth, the Overseers of the Poor of that town may give a bond for the support of the patient. Or, when this is inconvenient, an application may be made to the Probate Court of the county where the patient resides, and a warrant will be issued for the commitment of the patient to the hospital, and the town will be held responsible for the support of the patient.

In all other cases a bond from responsible persons, as principal and surety will be required for the expenses of the patient while in the hospital.

In all cases, before admission to the hospital, two physicians, one of whom shall be the family physician, must certify that the patient is insane.

All necessary clothing must be supplied by the friends of the patients.

Clothing will be supplied at the hospital, if desirable, and charged in the bills at cost.

Damages done to the furniture and other property to the amount of fifty dollars may also be charged.

Reasonable charges will be made in case of elopement, and funeral charge in case of death.

All bills are collected by the Treasurer quarterly, or interest charged on the same after becoming due.

Bills become due on the first of January, April, July and October, and when the patient leaves the hospital.

APR 25 '39 W.P.A.
